

ShoreStation® ToonRail

The 3-in-1 under-deck **lift support** with integrated **motor stop** and **load guides** is economical and maintenance free. The contoured poly-covered tubes both guide the pontoon into the lift and support it by simply lifting under the deck.

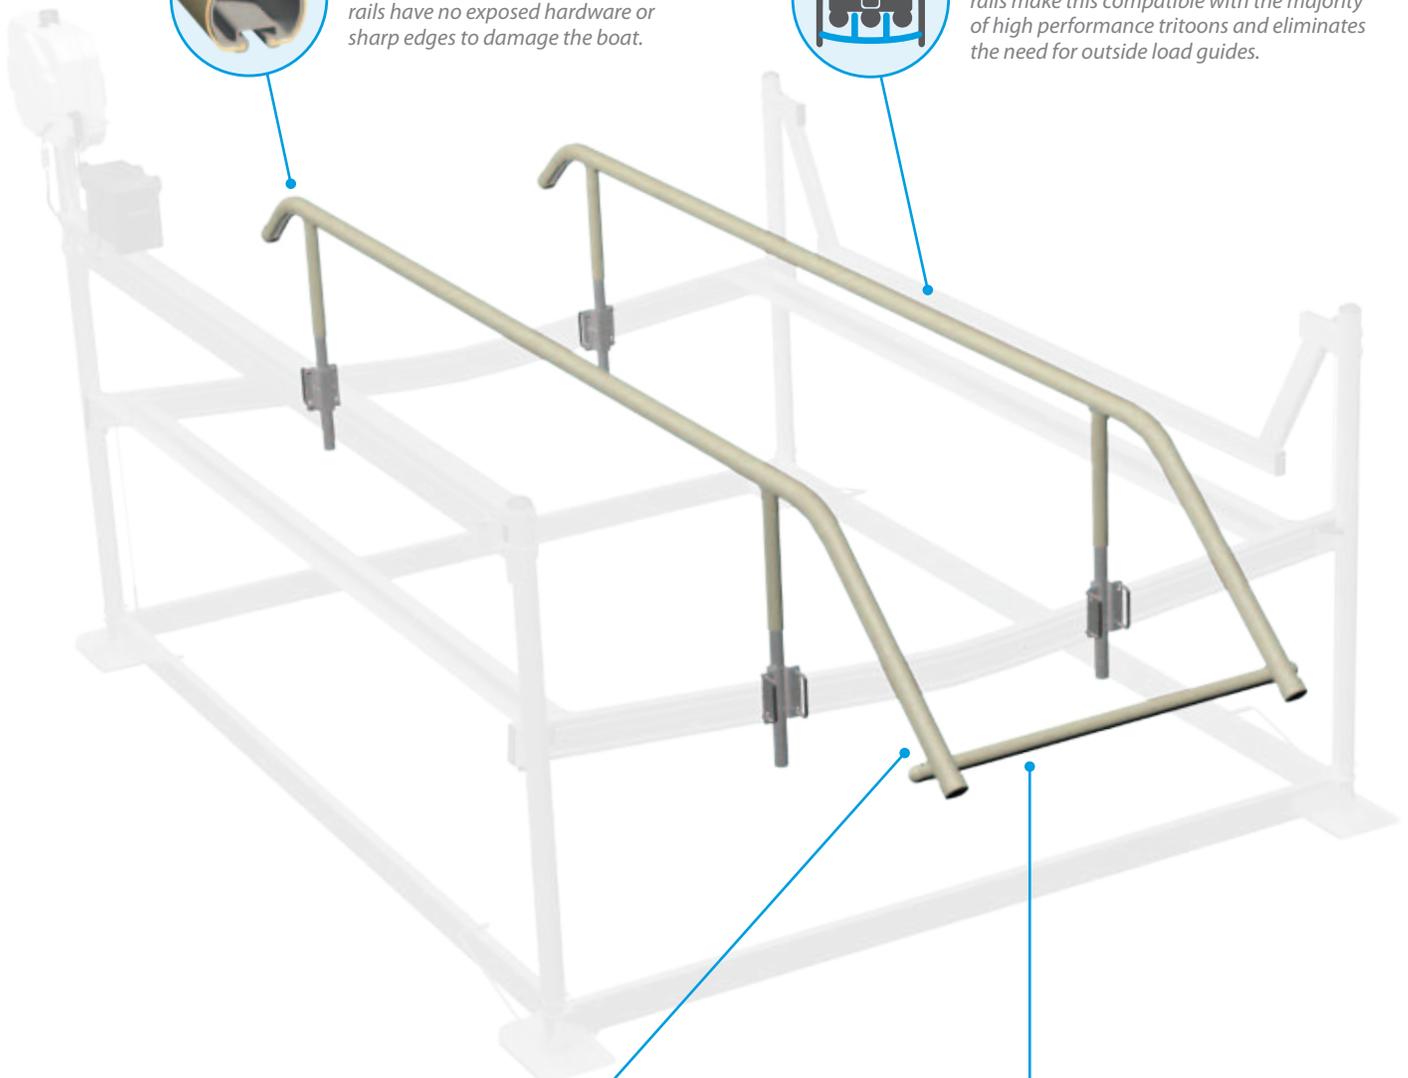

Boat Friendly Materials

Non-marring poly covered aluminum rails have no exposed hardware or sharp edges to damage the boat.

Perfect for Tritoons

The slim profile and adjustability of the 3" rails make this compatible with the majority of high performance tritoons and eliminates the need for outside load guides.

Stress-free Boat Landing

Featuring a unique flare design that extends beyond the lift to capture the bow and steer the boat to center. Making boat landing easier than ever.

Maintenance Free

No rust, no rot, no problem!

Cost Effective

The all-in-one ToonRail features lift support, motor stop and load guide at less than half the price of these options sold separately.
